Address

34464, Istanbul, Turkey

Education

2022 - Present
Computer Programming
Eskisehir Anatolian University

2021 - 2022
React Bootcamp
patika.dev

2020 - 2021
MITx 6.00.1x Introduction to Computer Science and Programming Using Python - Python Bootcamp
EDx

2011 - 2016
Bachelor Degree in English Language and Literature
Ege University

Expertise

- Software Development
- Web Development
- Typescript, Javascript
- HTML, CSS and other required tools.
- Fintech

Language

English - I can fluently speak & write in English

German - I am able to understand basic German and speak to survive.

Turkish - My mother tongue.

Experience

05.2024 - Present
Hangikredi
Frontend Developer

I am responsible for developing features for the company's super app, which serves over 16 million monthly users. I contributed to the Financial Report module, enabling users to obtain their Findeks report, and played a key role in the Next.js transformation of the Hangibilgi blog application, migrating it from an MVC infrastructure. Additionally, I conducted R&D and implemented improvements to enhance performance and SEO metrics in the Digital Onboarding module. I also ensure optimal Lighthouse performance across all projects using tools like New Relic.

05.2022 - 05.2024
ParamTech Software Company
Front End Developer

I developed features for the company's super app, with a particular focus on the lump sum payment and reporting module. To streamline development across various projects, I created a reusable component library, ensuring consistency and efficiency in the development process. I collaborated closely with UI/UX designers, providing technical insights and translating design wireframes from tools like Figma into functional, high-quality code using frameworks such as Ant Design.

I was responsible for designing and building large-scale projects that adhered to established JavaScript standards, bridging the gap between design and technical implementation to deliver seamless user experiences. My work included building and maintaining landing pages for the company's websites, including one developed entirely from scratch.

To improve content management and delivery, I integrated CMS platforms such as Contentful, Strapi CMS, Sanity CMS, and Netlify CMS. My experience spanned nearly every aspect of the JAMSTACK architecture, enabling me to deliver scalable, modern web solutions. Additionally, I optimized continuous deployment and integration pipelines to enhance the efficiency and reliability of the development lifecycle.

06.2021 - 04.2022
Eçözüm Information Technologies
Frontend Developer

I developed features for the company's fintech applications, including Netekstre and Netahsilat, which serve critical financial services needs. I undertook the task of refactoring legacy React codebases to modern React, leveraging hooks and functional components to improve performance, readability, and maintainability. Additionally, I created a reusable component library, which significantly streamlined development across multiple projects by ensuring consistency, reducing duplication, and accelerating the implementation process.

More About Me

Happily married. Sometimes create educational YouTube videos about coding. FPV drone pilot. Loves arduino & D.I.Y projects. Got two cats. Loves English Literature.

06.2020 - 03.2021
Vektora Software Company

Business Analyst

I was responsible for the PM (Plant Maintenance) module, ensuring its seamless integration and functionality within the broader system. I played an active role in one of Turkey's largest SAP projects for Sanko, contributing to the successful implementation and optimization of processes. My involvement included collaborating with cross-functional teams, addressing complex technical challenges, and ensuring the project met its objectives within the defined timelines.

Projects

Hangibilgi: Played main role in digital transformation of company's blog sub project from mvc project to Next.js.

Financial Report: Played a pivotal role in Hangikredi's sub project which allows users to learn their financial score and provides bank offers along with their scores.

Digital Onboarding: Played a pivotal role in Hangikredi's digital onboarding app which has millions of users. Taken active role in performance improvements.

BNPL, KYC, Posrapor, Netekstre, Netahsilat, Payment: Played a pivotal role in identifying and addressing customer needs within our flagship apps, including Kredim, Param, and Finrota.

Aksandik: As the solo developer I have developed the frontend of the project with Nextjs 13, NextAuth, Shadcn Ui, Tailwind, TypeScript etc. The project offers getting appointment from agreed hospitals, a blog section, uploading bills to get refund etc. www.aksandik.org

Developed the 'Kredim ile Öde' Application: Took full responsibility in developing a third party checkout payment application in collaboration with Akbank, enabling users to make payments using my company's own product, Kredim, through Akbank platforms.

Param Back-Office: Played an active role in the development of the company's back-office project.

Typescript Refactor of 'Payment Module' in Finrota App: Played a key role in transforming the legacy code of payment module which was initially written in JavaScript into TypeScript.

E-Fatura: Spearheaded the development of an e-billing application. This app empowered company accountants to efficiently manage, track, and report bills.

Case Api: Developed a full stack Next.js App which provides both an cross-origin-api and ui to test the api endpoints for the frontend case we send to applicants at our company. The application contains Next.js APIs that can work across origins, allowing candidates to test and consume the APIs in their case projects through a frontend interface similar to Swagger.

Website Development with various CMS Platforms: Integrated various CMS systems (ContentfulCMS, Strapi CMS) into company's and also it's sub-companies' landing pages while also developing them using Next.js 13++. Took the lead in crafting our company's brand-new website using Next.js in conjunction with Contentful CMS. Explore the result at ParamTech Website.

Mobile Responsiveness Transformation: Successfully transformed one of our banking web applications into a fully mobile-responsive platform. Isube Banking.

Next.js and Typescript Website Development: Designed and developed various company websites using Next.js and Typescript, ensuring a modern and efficient web presence. Examples include Param EU and Param UK.

Gatsby.js Blog & Landing Page: Created an engaging blog and captivating landing page using Gatsby.js and Netlify CMS. Discover the content at Blog.

Next.js, Three.js, and Tailwind Landing Page: Crafted a visually appealing landing page using Next.js, Three.js, and Tailwind CSS. View the design at Oblomov Media Landing Page.
